

Rain Barrels \$20.00

Bangor Township would like to work with all townships and communities in Bay County to reduce Stormwater runoff to protect our BAY, RIVERS and STREAMS. If you purchase a Rain Barrel, you will help in the effort to cut down on the Stormwater runoff in your community.

Stormwater is a problem; your rain barrel can help!

Stormwater is rain that did not soak into the ground or get taken up by plants as nature intended. When stormwater runs through our communities, it becomes dirty and polluted. It washes animal waste, garbage, fertilizers, chemicals, gas and oil from cars into our storm sewers. This pollution then flows into our streams, rivers and lakes.

What can you do about stormwater?

Using a rain barrel is an easy way you can help solve some of our stormwater problems. When you use a rain barrel, You prevent stormwater from entering our streets, and gather natural rain to water your garden. One rain barrel holds approximately 50 gallons.

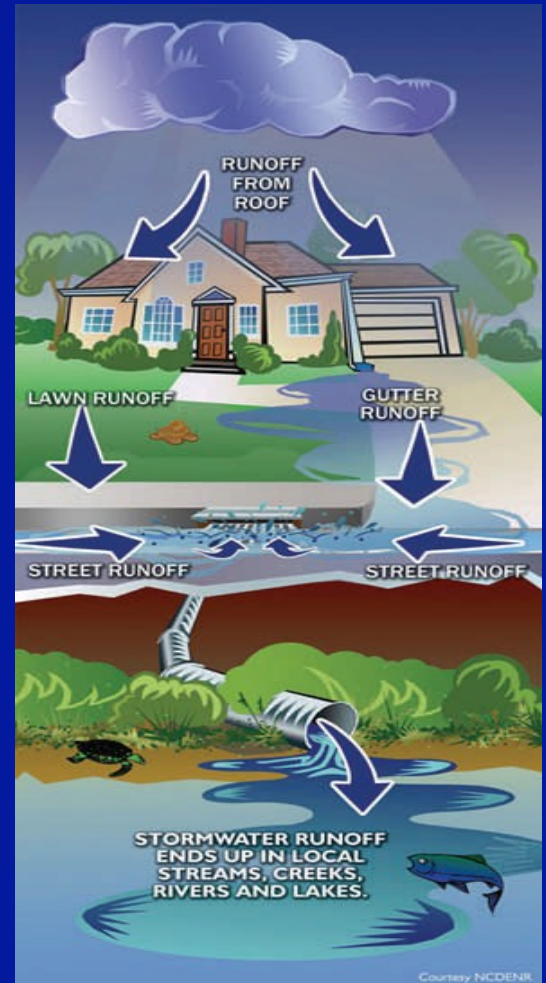

How can I schedule a rain barrel workshop?

We need your help to connect with our community to network and organize a Rain Barrel Construction Party. If interested, contact Terry Watson, Bangor Township Supervisor, or Assistant Barb Potts at 989-684-8931.

Be part of a working group that wants to stop sending pollutants into our Rivers & Bay
